### Significant Points

- A college degree and good interpersonal skills are among the most important qualifications for these workers.
- Although both occupations will benefit from an increase in investing by individuals, personal financial advisors will benefit more.
- Financial analysts will face keen competition for jobs, especially at top securities firms, where pay can be lucrative.

### Employment

Financial analysts and personal financial advisors held 298,000 jobs in 2002; financial analysts accounted for almost 6 in 10 of the total. Many financial analysts work at the headquarters of large financial companies, several of which are based in New York City. Nineteen percent of financial analysts work for securities and commodity brokers, exchanges, and investment services firms; and 17 percent work for depository and nondepository institutions, including banks, savings institutions, and mortgage bankers and brokers. The remainder work primarily for insurance carriers; accounting, tax preparation, bookkeeping, and payroll services; management, scientific, and technical consulting services; and State and local government agencies.

Approximately 38 percent of personal financial advisors are self-employed, operating small investment advisory firms, usually in urban areas. About 31 percent of personal financial advisors are employed by securities and commodity brokers, exchanges, and investment services firms. Another 14 percent are employed by depository and nondepository institutions, including banks, savings institutions, and credit unions. A small number work for insurance carriers and insurance agents, brokers, and services.

## **Job Outlook**

Increased investment by businesses and individuals is expected to result in faster-than-average employment growth of financial analysts and personal financial advisors through 2012. Both occupations will benefit as baby boomers save for retirement and as a generally better educated and wealthier population requires investment advice. In addition, people are living longer and must plan to finance more years of retirement. The globalization of the securities markets will increase the need for analysts and advisors to help investors make financial choices.

Deregulation of the financial services industry is also expected to spur demand for financial analysts and personal financial advisors. Since 1999, banks, insurance companies, and brokerage firms have been allowed to broaden their financial services. Many firms are adding investment advice to their list of services and are expected to increase their hiring of personal financial advisors. Numerous banks are now entering the securities brokerage and investment banking fields and will increasingly need the skills of financial analysts in these areas.

Employment of personal financial advisors is expected to [grow faster than the average](#) for all occupations through the year 2012. The rapid expansion of self-directed retirement plans, such as 401(k) plans, is expected to continue. As the number and complexity of investments rises, more individuals will look to financial advisors to help manage their money. Financial advisors who have either the CFP (R) certification or ChFC designation are expected to have the best opportunities.

Employment of financial analysts is expected to [grow about as fast as the average](#) for all occupations through the year 2012. As the number of mutual funds and the amount of assets invested in the funds increase, mutual-fund companies will need increased numbers of financial analysts to recommend which financial products the funds should buy or sell.

Financial analysts also will be needed in the investment banking field, where they help companies raise money and work on corporate mergers and acquisitions. However, growth in demand for financial analysts to do company research will be constrained by the implementation of reform proposals calling for investment firms to subsidize independent research boutiques and separate research from investment banking. Firms may try to contain the costs of reform by eliminating research jobs.

Demand for financial analysts in investment banking fluctuates because investment banking is sensitive to changes in the stock market. In addition, further consolidation in the financial services industry may eliminate some financial analyst positions, dampening overall employment growth somewhat. Competition is expected to be keen for these highly lucrative positions, with many more applicants than jobs.

## **Earnings**

Median annual earnings of financial analysts were \$57,100 in 2002. The middle 50 percent earned between \$43,660 and \$76,620. The lowest 10 percent earned less than \$34,570, and the highest 10 percent earned more than \$108,060. Median annual earnings in the industries employing the largest numbers of financial analysts in 2002 were as follows:

Other financial investment activities	\$74,860
Management of companies and enterprises	60,670
Securities and commodity contracts intermediation and brokerage	58,540
Nondepository credit intermediation	51,700
Depository credit intermediation	51,570

Median annual earnings of personal financial advisors were \$56,680 in 2002. The middle 50 percent earned between \$36,180 and \$100,540. Median annual earnings in the industries employing the largest number of personal financial advisors in 2002 were as follows:

Other financial investment activities	\$74,260
Securities and commodity contracts intermediation and brokerage	68,110
Depository credit intermediation	51,030

Many financial analysts receive a bonus in addition to their salary, and the bonus can add substantially to their earnings. Usually, the bonus is based on how well their predictions compare to the actual performance of a benchmark investment. Personal financial advisors who work for financial services firms are generally paid a salary plus bonus. Advisors who work for financial-planning firms or who are self-employed either charge hourly fees for their services or charge one set fee for a comprehensive plan, based on its complexity. Advisors who manage a client's assets usually charge a percentage of those assets. A majority of advisors receive commissions for financial products they sell, in addition to charging a fee.

## **Training, Other Qualifications, and Advancement**

A college education is required for financial analysts and is strongly preferred for personal financial advisors. Most companies require financial analysts to have at least a bachelor's degree in business administration, accounting, statistics, or finance. Coursework in statistics, economics, and business is required, and knowledge of accounting policies and procedures, corporate budgeting, and financial analysis methods is recommended. A master of business administration is desirable. Advanced courses in options pricing or bond valuation and knowledge of risk management also are suggested.

Employers usually do not require a specific field of study for personal financial advisors, but a bachelor's degree in accounting, finance, economics, business, mathematics, or law provides good preparation for the occupation. Courses in investments, taxes, estate planning, and risk management also are helpful. Programs in financial planning are becoming more widely available in colleges and universities. However, many financial planners enter the field after working in a related occupation, such as accountant, auditor, insurance sales agent, lawyer, or securities, commodities, and financial services sales agent.

Mathematical, computer, analytical, and problem-solving skills are essential qualifications for financial analysts and personal financial advisors. Good communication skills also are necessary, because these workers must present complex financial concepts and strategies in easy-to-understand language to clients and other professionals. Self-confidence, maturity, and the ability to work independently are important as well.

Financial analysts must be detail oriented, motivated to seek out obscure information, and familiar with the workings of the economy, tax laws, and money markets. Strong interpersonal skills and sales ability are crucial to the success of both financial analysts and personal financial advisors.

Although not required for financial analysts or personal financial advisors to practice, certification can enhance one's professional standing and is strongly recommended by many financial companies. Financial analysts may receive the title Chartered Financial Analyst (CFA), sponsored by the Association of Investment Management and Research. To qualify for CFA designation, applicants must hold a bachelor's degree, must have 3 years of work experience in a related field, and must pass a series of three examinations. The essay exams, administered once a year for 3 years, cover subjects such as accounting, economics, securities analysis, asset valuation, and portfolio management.

Personal financial advisors may obtain the Certified Financial Planner credential, often referred to as CFP (R), demonstrating to potential customers that a planner has extensive training and competency in the area of financial planning. The CFP (R) certification, issued by the Certified Financial Planner Board of Standards, Inc., requires relevant experience, the completion of education requirements, the passage of a comprehensive examination, and adherence to an enforceable code of ethics. Personal financial advisors may also obtain the Chartered Financial Consultant (ChFC) designation, issued by the American College in Bryn Mawr, Pennsylvania, which requires experience and the

completion of an eight-course program of study. Both designations have a continuing education requirement.

A license is not required to work as a personal financial advisor, but advisors who sell stocks, bonds, mutual funds, insurance, or real estate may need licenses to perform these additional services. Also, if legal advice is provided, a license to practice law may be required. Financial advisors who do not provide these additional services often refer clients to those qualified to provide them.

Financial analysts may advance by becoming portfolio managers or financial managers, directing the investment portfolios of their companies or of clients. Personal financial advisors who work in firms also may move into managerial positions, but most advisors advance by accumulating clients and managing more assets.
